EARTH OBSERVATION AND DATA SCIENCE

DLR Beamer template | Adapted from PowerPoint Master 1.31

Vytautas Jančauskas
German Aerospace Center (DLR)
Remote Sensing Technology Institute
15 October 2026

Standard content layout

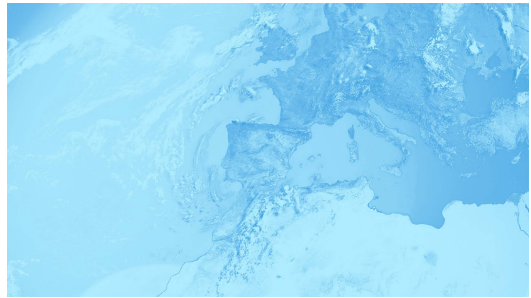

- The original DLR logo, colours and map backgrounds.
- Grey headings and black text on a white background.
- A narrow colour strip carries the slide number.
  - Nested lists use smaller square bullets.
- Standard Beamer content remains editable in LaTeX.

Text and image layout

A familiar slide structure

Use this layout for a map, photograph or research figure alongside a short explanation.

- Keep figure labels readable.
- Add an image credit below the figure.

Map background from the supplied DLR master.

Vector autoregression

A multivariate model predicts the current observations from their past:

$$\mathbf{z}_t = \sum_{\ell=1}^{p} \mathbf{M}_\ell \mathbf{z}_{t-\ell} + \mathbf{u}_t.$$

- $\mathbf{z}_t$: the vector of observations at time t.
- $\mathbf{M}_\ell$: coefficients at lag ℓ.
- $\mathbf{u}_t$: the remaining innovations.

GREEN CHAPTER VARIANT

Tables and comparison layouts

Layout	Beamer equivalent
Title	Original map, large title and subtitle band
Content	Heading, bullets, equations or figures
Two or three columns	Standard `columns` environment
Chapter	Image background and coloured title band
Full image	Image with DLR logo and optional credit

YELLOW CHAPTER VARIANT

Three-column content layout

Observations

Satellite measurements describe the state of the environment.

Methods

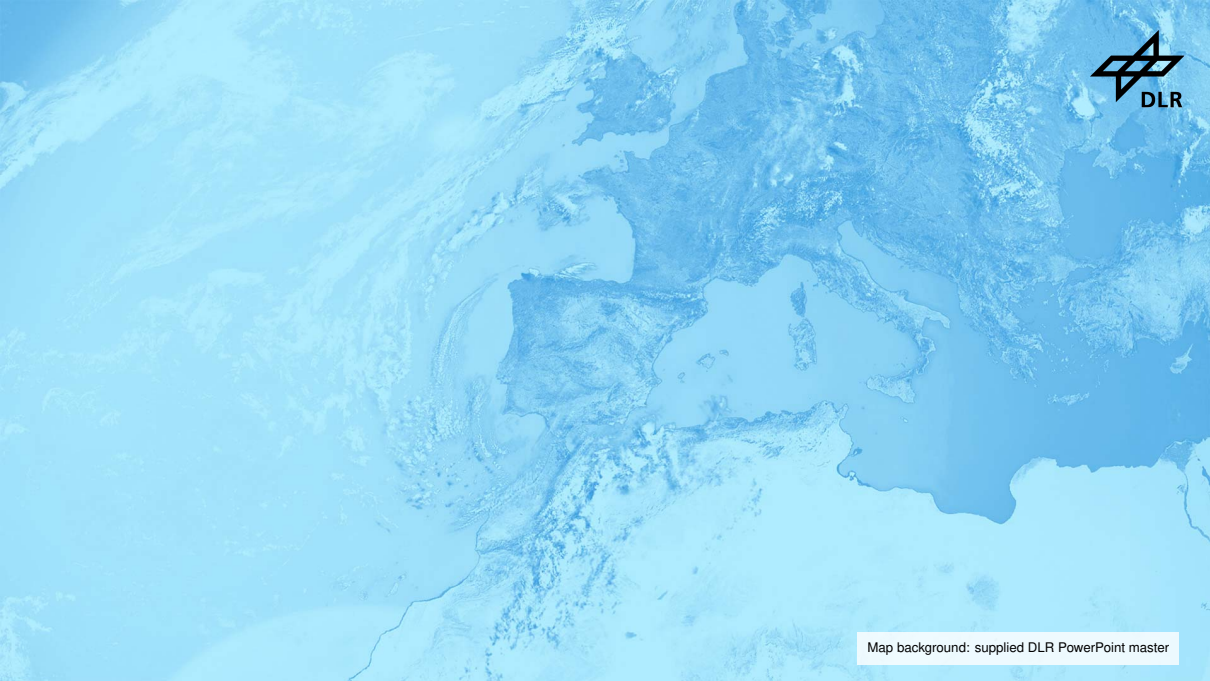

Statistical models connect observations across space and time.

Interpretation

Figures and equations explain the results and their limitations.

Colour use

The original master permits a colour change between chapters. Keep one colour within each chapter.
